Liquefied gas carriers classed with Lloyd's Register

KEY TO LIQUEFIED GAS CARRIERS

The only ships included in this list are liquefied gas carriers classed with Lloyd's Register

Column 1

L.R. NUMBER	As recorded in the Register of Ships.

Column 2

SHIP'S NAME	The name of the ship at the time of going to press. Changes of name are reported in the monthly Supplement.

Columns 3 and 4

✠Lloyd's RMC (LG)	This notation is assigned to a liquefied gas carrier or tanker classed with Lloyd's Register in which reliquefaction or refrigeration equipment is approved and fitted for cargo temperature and pressure control, where the equipment has been constructed, installed and tested in accordance with the relevant requirements of the Rules.
Lloyd's RMC (LG)	This notation is assigned to a liquefied gas carrier or tanker classed with Lloyd's Register in which reliquefaction or refrigeration equipment is fitted for cargo temperature and pressure control, where the equipment has been found equivalent to Rule requirements and tested in accordance with the relevant requirements of the Rules.
Date of Classification Last record of Special Survey	Reliquefaction/refrigeration equipment.

For explanation of abbreviations *see* Key to the Register of Ships.

Columns 5 and 6

MACHINERY (For reliquefaction/refrigeration)

C in C	Coils in casing
Cyl.	Cylinder(s)
DA	Double acting
HP	High Pressure
IS	Interstage
LP	Low Pressure
rpm	Revolutions per minute
Sep	Separator
SandT	Shell and Tube
2S	Two stage

Compressors are of the single-acting, single-stage reciprocating type, driven by electric motors, unless otherwise stated, e.g. DA, 2S.

Dimensions given in mm are bore × stroke for reciprocating compressors, diameter × length of rotors for double screw compressors, and self-explanatory for other rotary compressors.

Columns 7 and 8

CARGO TANKS	This is 100 per cent of the tank volume in cubic metres measured up to the access manhole cover.

KEY TO REFRIGERATED CARGO INSTALLATIONS

The only ships included in this list are those having refrigerated cargo installations classed with Lloyd's Register

Column 1

LR Identity Number — As recorded in the Register of Ships.

Column 2

Ship's Name — The name of the ship at the time of going to press. Changes of name are reported in the monthly Supplement.

Columns 3 and 4

✠Lloyd's RMC
Lloyd's RMC

Denotes that the refrigerated cargo installation of a ship has been classed with Lloyd's Register for the duty indicated by the class notation. The ✠ signifies that the installation was constructed under the supervision of the surveyors to the Rules of Lloyd's Register.

‡

Denotes that the installation is considered suitable for the carriage of fruit. It indicates that the rate of air circulation through the chambers or to the containers and the air refreshing and-thermometry arrangements are suitable for the carriage of fruit cargoes. It also indicates that the installation has excess capacity for the cooling down of the cargo. The symbol is also assigned to fishing vessels with Lloyd's Register classed refrigerating capacity to freeze down their catch.

Columns 5 and 6

Machinery

C in C	Coils in casing
Com.	Compound
Cyl.	Cylinder(s)
DA	Double acting
HP	High Pressure
LP	Low Pressure
LT	Low temperature
LTD	Lower 'Tween deck
R12	Dichlorodifluoromethane
R22	Monochlorodifluoromethane
R717	Ammonia
rpm	Revolutions per minute
S and T	Shell and tube
TD	'Tween deck
2S	Two stage
UTD	Upper 'Tween deck
W/K	Watts/Kelvin temperature difference

Compressors are of the single-acting, single-stage reciprocating type, driven by electric motors, unless otherwise stated, e.g. DA, 2S.

Dimensions given in mm are bore × stroke for reciprocating compressors, diameter × length of rotors for double screw compressors, and self-explanatory for other rotary compressors. For single screw compressors, a single size defining dimension is given.

Columns 7 and 8

The method of cooling involves forced circulation of air through coolers, unless the word 'grids' is used; in which cases there are refrigerant coils over insulated interior surfaces of the chambers, and no fans.

Cargo Chambers — Total capacity in cubic metres. The capacity is measured from the face of overhead, 'tween deck and tank top insulation lining, or the surface of 'tween decks where uninsulated, or from the face of brine pipes or air ducts; from the face of permanent cargo battens of air screens or air coolers or casings. Deductions are made for floor gratings which are part of the air circulation system, for pillars, stanchions and other fixtures which interfere with the cargo-carrying capacity, but not for loose or portable floor dunnage, or for portable bins or trays and their supports.
